PUMA PREMIUM SERIES 250 CM STONE CRUSHER MACHINE

The Puma Stone Crushing Machine breaks stones on the field surface and up to a depth of 30 cm with the help of specially designed carbide diamond blades. The crushing process is carried out between 50 carbide diamond blades and Hardox plates. The interior of the machine is equipped with wear-resistant, replaceable Hardox plates.

The Puma Stone Crushing Machine is used in stony fields, orchards, greenhouses, and all lands suitable for agriculture. By breaking the stones on the land surface, the soil becomes suitable for agriculture, and the minerals in the stones mix with the soil. As a result, agricultural yields increase, and the use of chemical fertilizers decrease.
